

Lab 2: Agile Backlog Creation & Sprint Simulation in Jira

Name: Dhruv Rajagopalan

SRN: PES1UG24AM086

Project: Campus Placement & Internship Pipeline

Use Case(s): Record Interview Outcome, Process Offer Letter

Epic and User Stories

Epic 5: Interview Outcomes

Description: Record the result of each interview round and keep a history of the applicant's progress.

User Story	As a	I want to	So that	Priority	Story Points
5.1 Record Outcome	corporate recruiter	mark an applicant as Selected, Rejected or Next Round after an interview	the result is saved for the placement cell	High	3
5.2 Outcome History	placement officer	see an applicant's result for every round	there is a record of how they progressed	Low	2

Epic 6: Offer Letter Processing

Description: Create offers for selected applicants and let students respond to them.

User Story	As a	I want to	So that	Priority	Story Points
6.1 Generate Offer	placement officer	create an offer for a selected applicant	the offer can be issued to them	High	5
6.2 Accept/Decline Offer	student	accept or decline my offer	the placement cell knows my final decision	Medium	3

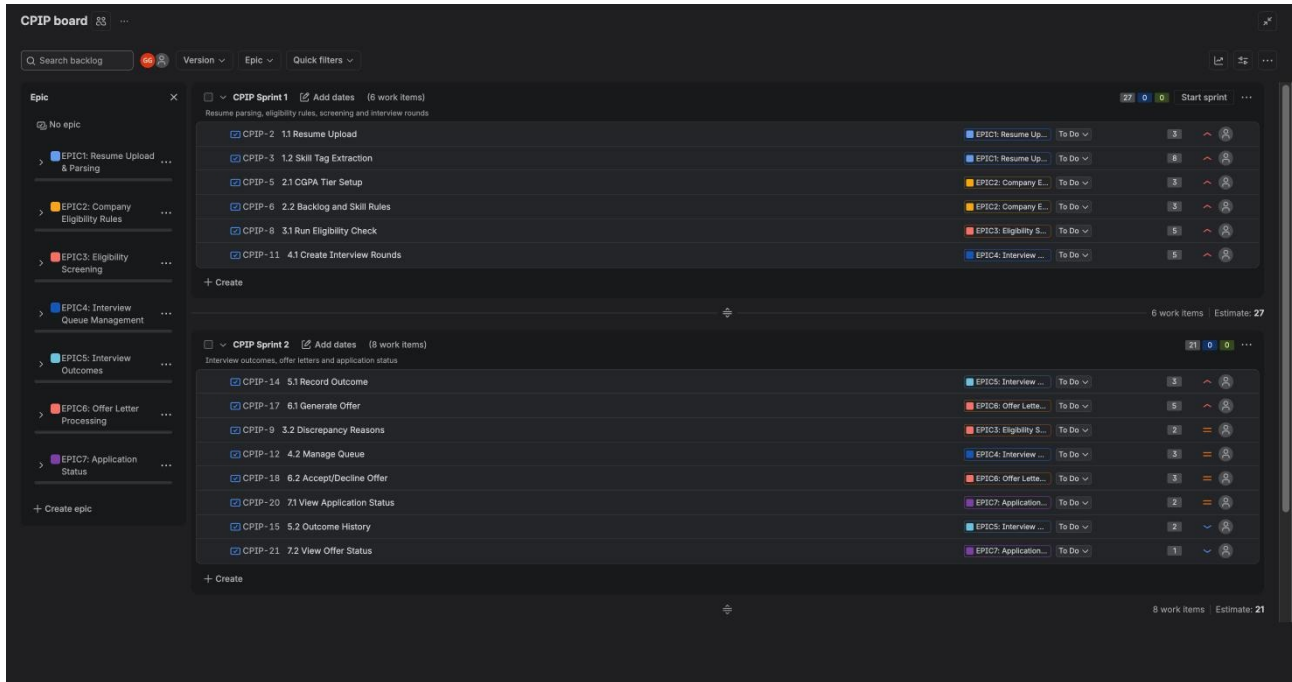

Sprint Allocation (1 week each)

Sprint 2: 5.1, 5.2, 6.1, 6.2 (13 points)

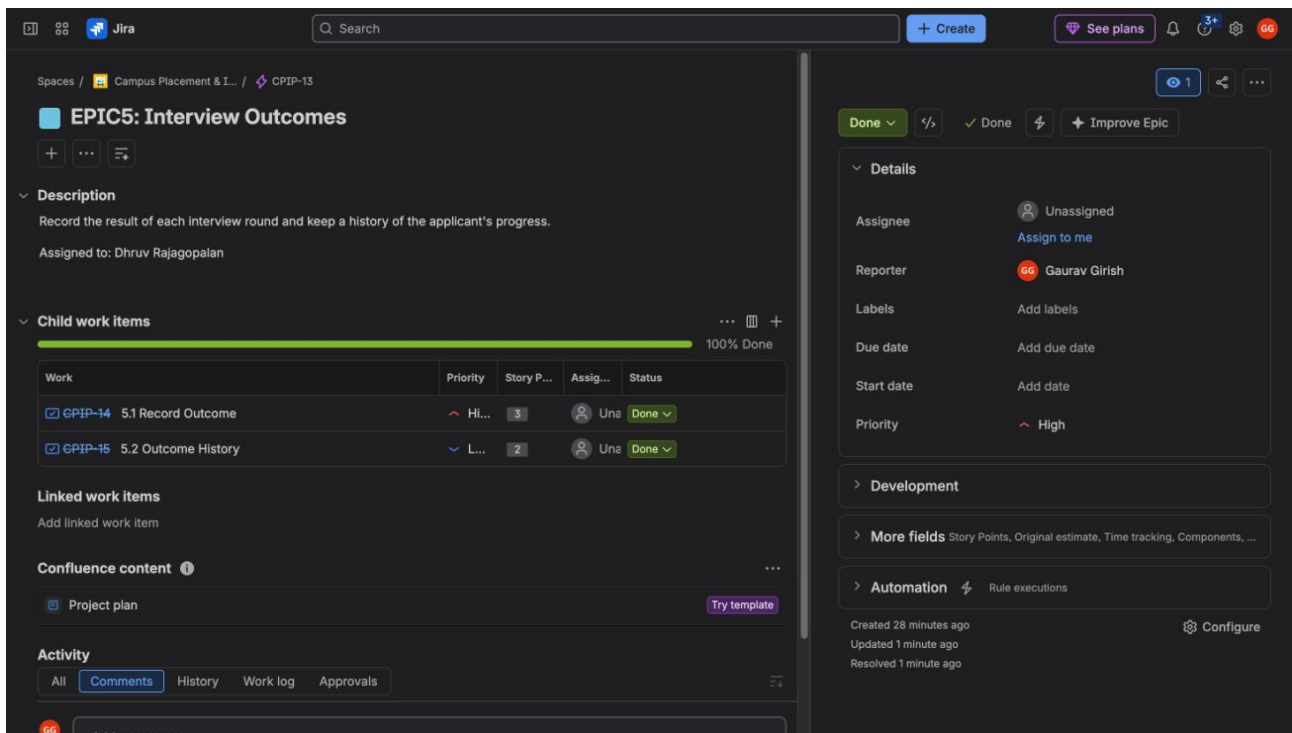

Total: 13 points

Burndown Chart - Sprint 2:

Reflection Questions

1. Did your estimations reflect the actual effort?

Yes. Generate offer was 5 points since it involves creating the offer record and checking that the applicant is selected. Record outcome and accept/decline offer were 3 points each, and outcome history was 2 points as it only displays saved results.

2. Was your backlog well-prioritized?

Yes. Record outcome and generate offer were High since the pipeline cannot be completed without them, while outcome history was Low as it is only a record. Since these depend on the interview rounds from Sprint 1, they were kept for Sprint 2.

3. How did your simulated sprint align with your plan?

All four of my stories were planned for Sprint 2 and were completed. 5.1 and 6.1 were done first as they were ranked highest, followed by 6.2 and 5.2.

4. What insights did the burndown chart give about your team's capacity?

The Sprint 2 burndown dropped from 21 to 0 right at the start instead of following the guideline because the sprint was simulated in a short time. It does not show a realistic pace, but it shows the team can handle around 21 points in a one week sprint.
