

Lab 2: Agile Backlog Creation & Sprint Simulation in Jira

Name: Sunay R Hegde

SRN: PES1UG24AM903

Project: Campus Placement & Internship Pipeline

Use Case(s): Check Eligibility, Manage Interview Queue

Epic and User Stories

Epic 3: Eligibility Screening

Description: Check each applicant against the eligibility rules of the drive and show the reason if they are ineligible.

User Story	As a	I want to	So that	Priority	Story Points
3.1 Run Eligibility Check	placement officer	check an applicant against the drive's eligibility rules	ineligible students are filtered out before interviews	High	5
3.2 Discrepancy Reasons	student	see which rule I failed when I am marked ineligible	I know why I cannot apply to that drive	Medium	2

Epic 4: Interview Queue Management

Description: Allow the placement officer to create interview rounds and manage the queue of eligible applicants.

User Story	As a	I want to	So that	Priority	Story Points
4.1 Create Interview Rounds	placement officer	create interview rounds for a drive and add eligible applicants to them	the selection process is organised	High	5
4.2 Manage Queue	placement officer	reorder applicants and move them to the next round	I can manage the queue as the drive goes on	Medium	3

Sprint Allocation (1 week each)

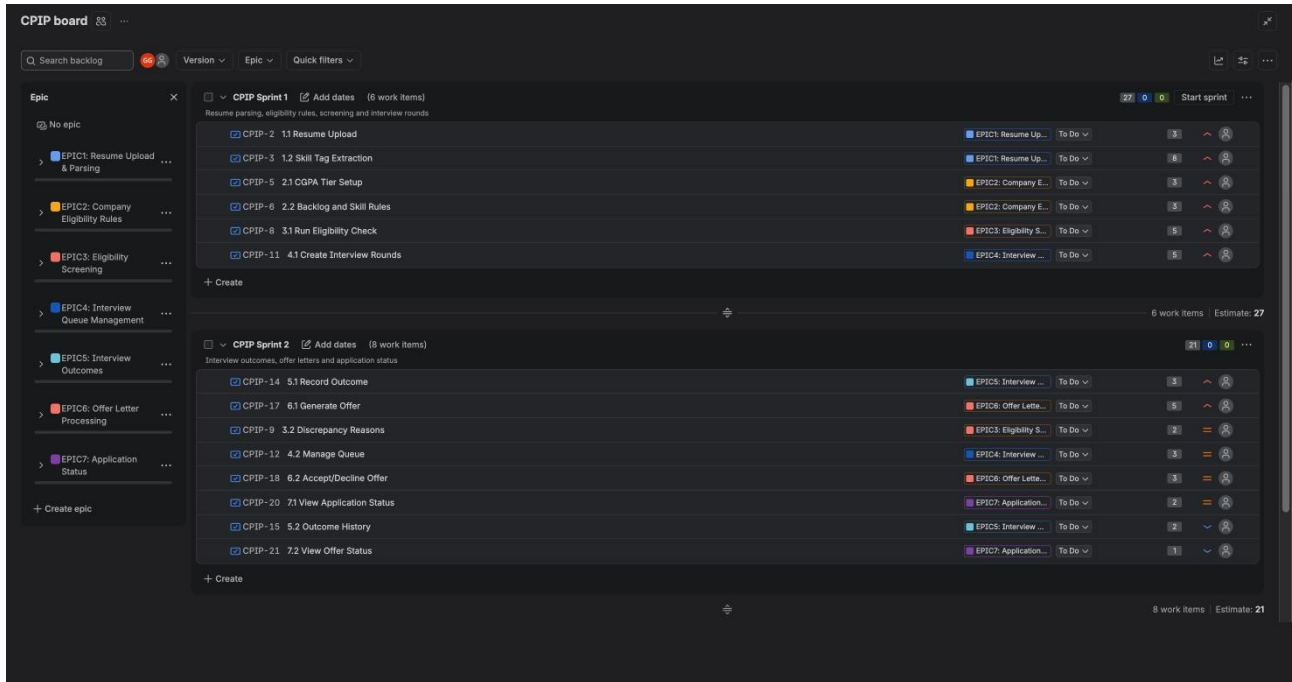

Sprint 1: 3.1, 4.1 (10 points)

Sprint 2: 3.2, 4.2 (5 points)

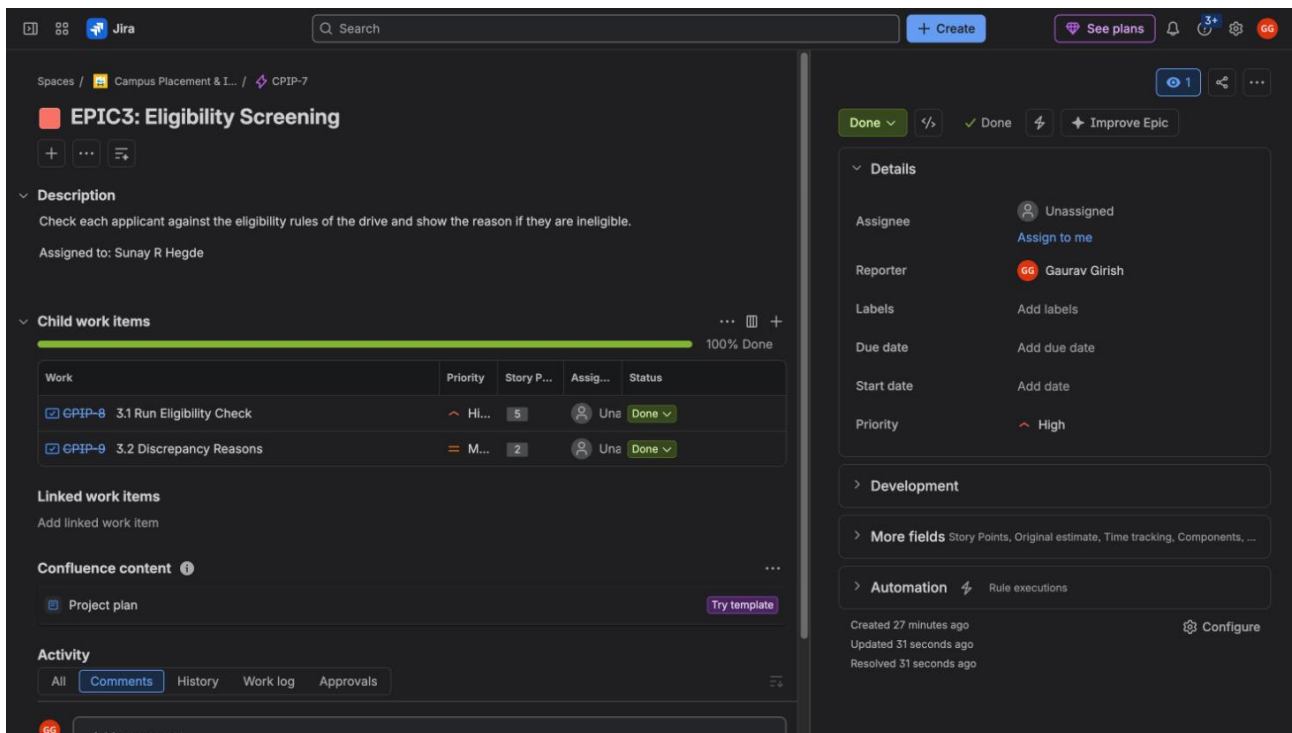

Total: 15 points

Burndown Chart - Sprint 2:

Reflection Questions

1. Did your estimations reflect the actual effort?

Yes. Run eligibility check and create interview rounds were 5 points each since they contain the main logic of comparing profiles with rules and building the queues. Discrepancy reasons (2) and manage queue (3) were smaller since they build on the first two stories. The estimates felt right relative to each other.

2. Was your backlog well-prioritized?

Mostly. 3.1 and 4.1 were High and went into Sprint 1, while 3.2 and 4.2 were Medium and went into Sprint 2. Looking back, 3.2 Discrepancy Reasons could have gone into Sprint 1 along with 3.1 since they are closely related.

3. How did your simulated sprint align with your plan?

My stories were split across both sprints (10 points in Sprint 1 and 5 points in Sprint 2) and all of them were completed in the sprint they were planned for.

4. What insights did the burndown chart give about your team's capacity?

Both burndown charts show the remaining work dropping straight to 0 (27 points in Sprint 1 and 21 in Sprint 2) instead of following the guideline, since the sprints were simulated. Over the two sprints the team completed 48 points, which is about 24 points per sprint.
