

1. UNIQUE EPIC SPECIFICATION

EPIC-03: Multi-Round Interview Queue & Assessment Management

Lab 1 Traceability: FR-003 & FR-004 & UC-03, UC-04 | Methodology: Agile-Scrum (Fibonacci Story Points & Planning Poker)

Orchestrate end-to-end recruitment drive logistics across multiple sequential assessment stages (Online Coding Test, Technical Interview 1, Technical Interview 2, HR Round). Provide real-time queue sequencing, candidate slot alerting, structured interviewer scorecards, dynamic no-show reordering, and automated promotion of shortlisted candidates into successive rounds.

2. USER STORIES & ESTIMATION TABLE

Total Epic Scope: 18 Story Points		Sprint 1 Commitment: 10 Story Points	Sprint 2 Commitment: 8 Story Points	Estimation Technique: Planning Poker (Fibonacci Scale)	
Issue ID	User Story Description (As a / I want / So that)	Acceptance Criteria	Priority	Points	Sprint
CPIP-301	As a placement officer, I want configure multi-round interview stages (OA, Tech 1, Tech 2, HR) and initialize candidate interview queues, So that placement drives operate in a structured, sequential pipeline.	PASS: Officer can define N rounds per company drive and populate round queues with eligible candidates. FAIL: Candidates can bypass intermediate rounds without administrative override.	HIGH	5	SPRINT 1
CPIP-302	As a student applicant, I want receive real-time queue slot alerts, room/link details, and estimated interview time on my phone/email, So that I can report to my interview round on time and prepared.	PASS: Automated notification sent at least 30 minutes prior to interview slot with accurate panel details. FAIL: Notification sent after scheduled slot time.	HIGH	3	SPRINT 2
CPIP-303	As a corporate recruiter, I want a standardized digital scorecard to log candidate scores, interview notes, and decision flags (Selected, Rejected, Next Round), So that evaluations are recorded systematically immediately after each interview.	PASS: Recruiter submits scorecard with mandatory rubric scores; applicant profile updates instantaneously. FAIL: Outcome saved without candidate or interviewer identifier.	HIGH	5	SPRINT 1
CPIP-304	As a placement officer, I want reorder interview queues dynamically and flag candidate no-shows, So that interviewer panels never remain idle waiting for delayed applicants.	PASS: Drag-and-drop queue reordering updates live panel roster within 2 seconds. FAIL: No-show applicant remains in active interview waiting slot.	MEDIUM	2	SPRINT 2
CPIP-305	As a placement officer, I want candidates marked 'Selected' in Round N to be automatically promoted into the Round N+1 queue, So that transition between hiring stages is completely automated without manual spreadsheet tracking.	PASS: Candidates with 'Selected' status are batch-queued for the subsequent round. FAIL: Rejected candidates accidentally carried over into higher round.	HIGH	3	SPRINT 2

3. JIRA WORKSPACE DELIVERABLES & SCREENSHOTS

Demonstration screenshots captured from Atlassian Jira workspace for **EPIC-03**.

Deliverable 1: Jira Backlog with Epics and User Stories

Backlog View (Keyboard shortcut 'E' for Epic Panel)

Deliverable 2: Story Point Assignments

Fibonacci Planning Poker Estimates

Deliverable 4: Burndown Chart

Reports > Burndown Chart (Remaining SP vs. Guideline)

4. REFLECTION QUESTIONS

1. Did your estimations reflect the actual effort?

Yes, our story point estimations reflected the actual effort well. Story CPIP-301 (Stage & Queue Configuration) was assigned 5 story points due to complex multi-state lifecycle management across multiple sequential rounds. Story CPIP-303 (Recruiter Evaluation Scorecard) was also estimated at 5 points because concurrent scoring by multiple corporate interviewers required robust locking and status validation. Planning Poker discussions helped the team identify concurrency challenges early, validating our 5-point assignments.

2. Was your backlog well-prioritized?

Yes, the backlog was prioritized to eliminate bottlenecks for live placement drives. The ability to establish interview queues (CPIP-301) and record corporate outcomes (CPIP-303) are mandatory baseline features. Without these, no interview drive can physically run. Operational conveniences such as real-time applicant push alerts (CPIP-302), dynamic queue adjustments for no-shows (CPIP-304), and automated batch promotion (CPIP-305) were scheduled for Sprint 2 to build on top of a proven core workflow.

3. How did your simulated sprint align with your plan?

The simulated sprint aligned tightly with our plan. We committed 10 points for Sprint 1 and completed both major stories without experiencing scope creep. Simulating the movement of stories from To Do to In Progress and Done allowed us to verify that handoffs between placement officers and interviewers were logically coherent.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart demonstrated a clean downward trajectory, burning 5 points mid-sprint upon queue completion and the final 5 points upon scorecard completion. The chart established that our team's sustained throughput is around 10-11 story points per sprint. The steady progression confirms that the scope was well-estimated and the team did not over-commit during sprint planning.
